

METHOD AND SYSTEM FOR A SERVICE CONSUMER TO CONTROL
APPLICATIONS THAT BEHAVE INCORRECTLY WHEN REQUESTING
SERVICES

ABSTRACT OF THE DISCLOSURE

A dispute resolution system for requesting a service provider to provide services so that the service provider can demonstrate to a service intermediary that a service consumer requested services. A service consumer that wants to start requesting services of the service provider registers with the service intermediary an end code of a sequence of code generated using a one-way function. The service intermediary provides the end code to the service provider. The service consumer can then use codes of the sequence to request the service provider to provide services. When the service provider receives a request, it verifies that the code of the request can be used to derive the end code. If the verification is successful, then the service provider can provide the verified code to the service intermediary as non-repudiable evidence of the services requested by the service consumer.
